Convergence of Residuals for Slab [x,μ]

thickness = 2 [x−units]; $S(\mu) = \mu e^{-\mu^2}$; hist/iter = 50

Legend:
- ~ (iteration)$^{-1/2}$ for illustration
- integration based on 1000 bins
- (scaled).... based on 1000 bins
- integration based on 2000 bins

(−) Reduced source weight

Iteration number
